1. WATER ABSORPTION

Water absorption rate is one of the most important factors affecting the long-term use of products. The completely dry glass mosaics are thrown into boiling water, boiled for two hours, left to cool for four hours. The water absorption rate in its dry state is determined by the weight change after the test.

The water absorption test result of 10 samples selected from the Faber Cnk Usa glass mosaic collection is 0%.

2. SURFACE WEAR

Abrasion of glass mosaic surfaces may cause loss of color and gloss over time. Friction and contact is provided with abrasive steel balls and various oxidants on scratch-up glass mosaic surfaces. The cycle with changes in the surface forms the product strength class.

The surfaces of Faber Cnk Usa glass mosaics did not change until 750-1500 cycles.

3. FROST RESISTANCE

Freezing of glass mosaics in extreme cold causes cracking and breaking. The most defining feature in freezing is water absorption resistance. Freezing and thawing is done 50-100 times on glass mosaics. Glass mosaics are kept at -5 ° C for 15 minutes and then heated to 5 ° C.

As a result of the freezing test, damage and water absorption rate did not change in an of the 10 samples selected from the Faber Cnk Usa glass mosaic collection.

4. CHEMICAL RESISTANCE

Swimming pools, one of the areas where glass mosaics are used the most, are areas where chemicals are used extensively and mosaic surfaces must have high strength.

Glass mosaics; ammonium chloride, sodium hypochlorite, acid and alkali are kept in solutions prepared in low and high concentrations. Faber Cnk Usa glass mosaic surfaces have been determined as Class A, the highest class of this test, as a result of chemical tests.

5. STAIN RESISTANCE

The resistance of glass mosaics to stains is important for long life and use like the first day. Glass mosaics; The thin oil with dye is kept in 13g / l iodine solution, olive oil and hot water above 55 ° C.

The surfaces of Faber Cnk Usa glass mosaics have been determined as the 5th grade as a result of the staining resistance test, the highest class of this test.

1 GENERAL INFORMATION

Çimsa Super White Cement (CEM I 52.5R) is preferred in more than 70 countries in the world with its stability and high strength.

The advantages offered by **Çimsa Super White** Cement to the Applications;

- High early and final strength,
- Fast production possibility,
- High whiteness,
- Low alkali content.

2 APPLICATION AREA

Çimsa Super White Cement application areas are;

- Construction chemical productions,
- Precast productions,
- Terrazzo tile productions,
- Pumice productuctions,
- Autoclaved aerated concrete productions,
- Exposed concrete.

3 PRODUCTION

Stability is the focal point of the Çimsa production plants and the variability in the product parameters is minimized by the controls at each stage during the process from raw material to delivery. Production processes are certified according to EN ISO 9001 and EN ISO 18001 standards.

4 PHASE COMPOSITION

Main mineral Phases : C₃S, C₂S

Auxiliary Mineral Phases: C₃A

5 WHITENESS

Whiteness of the **Çimsa Super White** Cement is done according to L, a, b, and Y values with regard to Hunter Lab systematic.

L (Brightness)	92.2
a (Greenness)	-1.65
b (Yellowness)	2.90
Y (Whiteness)	85,0

8 QUALITY CONTROL

Çimsa Super White Cement is subject to quality control conforming to EN 197-1 standards. It is presented to foreign markets with CE certified.

9 SAFETY INSTRUCTIONS

Standard safety requirements for general cements are followed. Please refer to the **Çimsa Super White** Cement Safety Data Sheet for more information.

10 STORAGE CONDITIONS AND SHELF LIFE

Çimsa Super White Cement must be stored in dry and sheltered conditions. In this case, it will retain its properties for at least 6 months. No more than 10 bags or 2 pallets should be stacked in a row. The product must be stored in its original package. In cases where it is not used, the mouth of the package must be tightly closed.
